Sebastián Ignacio Allende Cuello

Odoo/ERP Engineer & Applied AI

Santiago, Chile | sallendec@outlook.com

LinkedIn: linkedin.com/in/sebastianallende | GitHub: github.com/Ssebv | Portfolio: ssebv.github.io

PROFESSIONAL SUMMARY

Computer & Telecommunications Engineer with hands-on experience in Odoo 14–19 and automation with Artificial Intelligence. Migrated a production ERP for 4 companies across 3 countries to Odoo 19, with invoices, orders and stock verified against the previous version, and manage multi-country e-invoicing (SII, DIAN, SUNAT). Use coding agents as my main workflow, with over 2,600 AI-assisted commits, automated tests and human oversight.

SKILLS

ERP and Security: Odoo 14–19, Odoo.sh, module development, migrations, e-invoicing (SII, DIAN, SUNAT), Mercado Libre, Yuju, SAP S/4HANA, Salesforce, Active Directory, identity and access management (IAM), server hardening.

Languages and Databases: Python, TypeScript, JavaScript, SQL, Rust, Java, PHP, C, R; PostgreSQL, Prisma, Supabase, SQLite.

Testing and DevOps: pytest, Vitest, Playwright, Git, GitHub Actions, continuous integration (CI), Docker, Linux, Cloudflare Workers, Azure, AWS, HPC (NLHPC).

Artificial Intelligence: Generative AI, large language models (LLMs), Anthropic API (Claude), Vercel AI SDK, Gemini, OpenAI, Ollama, tool calling, structured outputs, vision and PDF (multimodal), guardrails, prompt engineering, RAG, embeddings, hybrid search, pgvector, LLM evaluation (recall@k, MRR).

AI Agents: Claude Code, subagents, agent orchestration, skills, hooks, Model Context Protocol (MCP), Cursor, OpenCode, voice interfaces.

Backend and Frontend: FastAPI, Fastify, Hono, REST APIs, webhooks, Next.js, React, Expo, React Native.

WORK EXPERIENCE

IT Manager & ERP Administrator December 2025 – Present

TOYNG, Importadora y Comercializadora Toyng Ltda. | Santiago, Chile (hybrid)

- Migrated the production ERP from Odoo 14 to Odoo 19 (June 2026): 4 companies across 3 countries, about 228 installed modules, and 41 custom modules consolidated into 18.
- Validated the cutover against an Odoo 14 baseline: identical invoices, orders and deliveries, and millions of stock units reconciled.
- Found a silent upgrade failure and repaired over 500,000 invoices; resolved or documented 16 issues in the first 3 days of operation.
- Multi-country e-invoicing (SII, DIAN, SUNAT), with electronic ledgers and batch electronic waybills in Peru.
- Retail consignment (Falabella, Ripley, Éxito), automated inter-company flow and integrations with Mercado Libre and Yuju.
- Built automated monitoring: daily health check with over 40 detectors and urgent alerts every 30 minutes.
- Backed critical flows with about 180 test files and PostgreSQL invariants that block inconsistent data.
- Use Claude Code as my main workflow: over 2,600 AI-assisted commits, with custom skills and staging before production.

Technologies: Python, Odoo, PostgreSQL, Claude Code, JavaScript, Git, Odoo.sh.

Security and Identity Management August 2025 – December 2025

Banco BICE | Chile

- Managed access and the identity lifecycle across Active Directory, Salesforce and critical banking systems.
- Mass migration of accounts and profiles for a bank merger; proofs of concept for fixed-term deposits.

Independent Digital Solutions Consultant 2024 – 2025

Clients: Gelymar, Farmacia Doctor Simi | Chile

- Gelymar: rebuilt the logistics system from scratch (Docker, SAP queries). Farmacia Doctor Simi: optimized the infrastructure.

Business Transformation Consultant, CX Analyst | Imppulsor, Ireland (remote) 2024

Professional Internship 2023
Gtd Manquehue S.A. | Santiago, Chile

- Document reading and summarization flow with Power Apps and OpenAI; BPMN model for IT license deprovisioning.

Teaching Assistant, Advanced Programming and Databases | Universidad Finis Terrae 2022

PROJECTS

Odoo 19 Migration Field Notes: failures from a real migration github.com/Ssebv/odoo-19-migration-field-notes

Odoo RAG: assistant over technical docs, with evaluation Code: github.com/Ssebv/odoo-rag

- RAG with hybrid search (vector and keyword), query translation and cited answers, using local models.
- Evaluated on 45 hand-written questions: recall@5 of 82% vs. 67% vector-only; in Spanish, from 20% to 90%.
- Answers: 90% with expected terms, 80% with valid citations, and 7 of 8 out-of-scope questions refused.

Technologies: Python, PostgreSQL, pgvector, Ollama, Docker, pytest, GitHub Actions.

ModoMax: online store with AI assistants Site: modomax.ressc.vip

- Shopping assistant with streaming, tool-based search and usage limits; chose tool calling over RAG for catalog size.
- WhatsApp support that discards a reply if another message arrives while the model is processing.
- Admin panel with chat, product descriptions and business insights validated with Zod schemas.

Technologies: TypeScript, Next.js, React, Prisma, PostgreSQL, Vercel AI SDK, Anthropic API, Vitest, Playwright.

Construye Hoy: construction project control with document reading

- Structured extraction from images and PDFs (invoices, quantity take-offs), with cost measured per model and call.
- Swappable LLM provider and tests using recorded responses, with no network; 51 test files and CI.

Technologies: TypeScript, Hono, Cloudflare Workers, Supabase, Expo, React, Anthropic API, Vitest, GitHub Actions.

SAC Next: community alarm platform (in development)

- Assistant restricted to its knowledge base, with personal data redaction and emergency detection.
- API of about 50 routes, isolated per-client deployment and encrypted backups; sized for 45 panels and 1,100 remotes.

Technologies: TypeScript, Node.js, Fastify, PostgreSQL, MQTT, Expo, React, Docker, Anthropic API, Vitest.

Voice Personal Assistant and AI Agents

- Extended JARVIS (fork) with Spanish voice, iPhone access and an email MCP; Alexa skill with verified signatures and an action allowlist.

Technologies: Python, FastAPI, Claude Code, Model Context Protocol (MCP), Alexa Skills.

Systematic Trading: with ML (paper trading) Summary: github.com/Ssebv/systematic-trading-showcase

- Multi-bot Machine Learning system in Python with no real capital: backtesting, scikit-learn ensembles, risk management and Telegram alerts.

FlagForge: multi-tenant feature flags in Rust Code: github.com/Ssebv/flagforge

- In-memory evaluation measured at 74 ns, with a change audit trail and a WebAssembly dashboard.

EDUCATION

Computer & Telecommunications Engineer Graduated 2026
Universidad Finis Terrae | Santiago, Chile Code: github.com/Ssebv/TBSimAlgoritmoGenetico_HPC_LOCAL

Chilean degree: Ingeniero Civil en Informática y Telecomunicaciones. Thesis: Computational scalability of parallel evolutionary algorithms, applied to robotic soccer teams.

Studies abroad: English as a Second Language (ESL) 2020 – 2021
Mississauga Secondary Academy | Ontario, Canada

LANGUAGES

Spanish: native | English: upper-intermediate (B2)
